Dexx – Ware Potatoes

Dexx is a **NEW** yellow-fleshed dual-purpose variety for French fries and export. Dexx performs well on sandy and light clay soils and is an **early** variety. Dexx has oval tubers that yield high yields with excellent frying qualities. Dexx can also be stored if necessary, as its frying qualities are excellent. Dexx is drought-resistant and does not require much nitrogen.

Properties

- Early variety and early tuber formation
- Very good yields
- (Long) oval tubers
- Suitable for the French fry industry, export and peeling
- Suitable for sandy soils and light clay soils
- Yellow skin colour and yellow flesh colour
- Irrigation is recommended on lighter soils
- Potato resistant Ro1,4
- Dexx requires little N: 150-170 kg N, gives 250-300 kg fresh potash and divide this into 2 applications

Cultivation

Animal manure can be used with Dexx, but be careful with the amount in relation to growth shocks, as this can have a negative effect on the dry matter.

Dexx is reasonably effective against scab. Ensure that the potato ridges are well constructed.

Planting in ridges of 75 cm

28/35	27-30 cm	48.000 plants/ha	1100-1200 kg/ha
35/50	36-38 cm	38.500 plants/ha	2000-2100 kg/ha
50/60	34-35 cm	40.000 plants/ha	2400-2500 kg/ha (Cut)

Dexx is moderately susceptible to Phytophthora in the foliage. A standard spraying schedule is recommended to keep the crop healthy and vigorous.
